

SETTING UP ENVIRONMENT

CREATE FLASK PROJECT

Team ID	PNT2022TMID23692
Project Name	Plasma Donor Application
Date of complete	04 October 2022

Step 1: Beginning the Flask installation with python installation from the official account:
<https://www.python.org/>.

Run the python setup and install the newest version of python.

Step 2: Open Command Prompt and cross-verify the installation of python by typing:

To check the version : **python --version**

```
Microsoft Windows [Version 10.0.22000.739]
(c) Microsoft Corporation. All rights reserved.

C:\Users\thendpy>python --version
Python 3.11.0

C:\Users\thendpy>pip --version
pip 22.3 from C:\Program Files\Python311\lib\site-packages\pip (python 3.11)

C:\Users\thendpy>python --version
Python 3.11.0

C:\Users\thendpy>pip --version
pip 22.3 from C:\Program Files\Python311\lib\site-packages\pip (python 3.11)

C:\Users\thendpy>
```

To check the path : **pip --version**

Step 3: After python installation, we need to begin with flask installation by typing :

Flask installation : **py -m install flask**

```
Command Prompt
C:\Users\ranga>py -m pip --version
pip 22.3 from C:\Program Files\Python311\Lib\site-packages\pip (python 3.11)

C:\Users\ranga>py -m pip install flask
Defaulting to user installation because normal site-packages is not writeable

Installing collected packages: MarkupSafe, itsdangerous, colorama, Werkzeug, Jinja2, click, flask
DEPRECATION: MarkupSafe is being installed using the legacy 'setup.py install' method, because it does not have a 'pyproject.toml' and the 'wheel' package is not installed. pip 23.1 will enforce this behaviour change. A possible replacement is to enable the '--use-pep517' option. Discussion can be found at https://github.com/pypa/pip/issues/8559
Running setup.py install for MarkupSafe ... done
WARNING: The script flask.exe is installed in 'C:\Users\ranga\AppData\Roaming\Python\Python311\Scripts' which is not on PATH.
Consider adding this directory to PATH or, if you prefer to suppress this warning, use --no-warn-script-location.

Step 5: Now to run a simple project open VS Code and type the following:

```
from flask import Flask app = Flask(__name_)
```

```
@app.route("/") def hello_world():  
return "<p>Hello, World!</p>"
```

And save the file as “app.py” copy its path and run it in the command prompt along with syntax **flask run**
